**Safe Sight**

## **VNA Nazareth Home Care**

## Program Overview

Low vision is a visual impairment that cannot be corrected by standard eyeglasses, contact lenses, medication or surgery. Most people with low vision have some usable sight and the loss has been gradual. Low vision is often overlooked as a reason a person has lost functional independence. We offer a specialized program to help individuals with low vision.

## The Program Benefits Individuals With:

- Macular degeneration
- Diabetic retinopathy
- Cataracts
- Glaucoma
- Brain injury (including stroke)

## Goals and Outcomes

Our goal is to equip patients with the skills, aids and confidence needed to function as independently as possible.

*Patients with low vision can acquire new strategies for accomplishing everyday tasks, coping with vision loss and maintaining safe mobility.*

## Included Services

- Patient assessment
- Falls risk assessment
- Adaptation of the patient's home environment with safety as the priority
- Training to enhance existing vision
- Evaluation of the impact of low vision on the patient's ability to manage medications and other medical conditions

## Lifestyle and Wellness

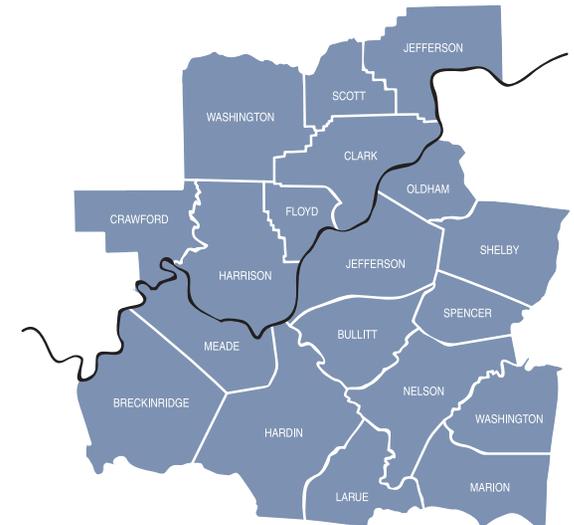

No matter the severity of vision loss, VNA Nazareth Home Care's Safe Sight Program can maximize all remaining vision and delay further loss. With the Safe Sight Program, patients can have the help they need, when they need it—without leaving home. We understand that staying as healthy and independent as possible is important to maintaining an active, enjoyable lifestyle—so we do our best to help you live your best.

## Interdisciplinary Team of Experts

The Safe Sight Program utilizes occupational and physical therapists with advanced low vision training, as well as registered nurses. Working closely with physicians, we provide a range of services to meet our patients' goals.

## We're There When You Need Us
